Description

The **SHT30-D** sensor has an excellent $\pm 2\%$ relative humidity and $\pm 0.5^\circ\text{C}$ accuracy for most uses. [Unlike earlier SHT sensors](#), this sensor has a true I2C interface.

The enclosed box is a Sensiron SHT-30 digital sensor ([much like our breakout here](#) or [this weather-proof mesh sensor](#)) but with the 4 data/power wires brought out to bare wires. Any SHT-3x code for a microcontroller will work, we are big fans of this sensor. [Check out the tutorial for Arduino and CircuitPython/Python, and more!](#)

The cable has four wires: Red = VCC (2.15-5VDC), Black = Ground, Yellow = I2C Clock, White = I2C Data.

Simply connect the red and black wires to your microcontroller or microcomputer power + ground. Connect the yellow wire to SCL, white wire to SDA of your controller's I2C port. There are built-in 10K resistors so you don't need external I2C pull-ups.

Compared to the [DHT22/AM2302](#), this sensor is more precise, more accurate, works in a bigger range of temperature/humidity, *and is less expensive!* We strongly recommend using this instead of DHT sensors, they are very annoying to use and this sensor is a true I2C sensor so it is universally supportable.

[We have an Adafruit Learning System guide Arduino & CircuitPython code, datasheets, and more for SHT3x sensors!](#)

Technical Details

- Sensor module dimensions: 59mm x 26.3mm x 13.4mm
- Wire length: ~22.8cm / ~9"
- Power: 2.15~5.5V
- Humidity: 0~100%RH
- Temperature: -40~125°C
- Precision: +/- 2%RH ~ +/- 0.2°C
- Output: Digital IIC
